“Unravelling Biochemistry Mysteries: Knot Theory Applied to Biochemistry”

Monday, December 2, 2019

Talk at 4:00 – Park 338

Tea at 3:30 – Park 361, Math Lounge

Abstract:

Mathematical modeling is an effective resource for biologists since it provides ways to simplify, study and understand the complex systems common in biology and biochemistry. Many mathematical tools can be applied to biological problems, some traditional and some more novel, all innovative. This presentation will review the mathematical tools that I use to model and study biological issues of DNA-protein interactions.
