

# Bi-Co Mathematics Colloquium

Mon, April 27. 4-5 PM. KINSC Hilles 109

**Sue Khim, CEO and founder of brilliant.org**, will give a public lecture about the narrative and mission of her organization

**Brilliant.org** takes an innovative approach to addressing the issue of upward mobility through access to education, using the platform of social networking to enable students to engage in challenging problems in the mathematical sciences. Khim's organization identifies talented students in remote locations and provides these students connections to mentors and educational opportunities not otherwise available to them. Her empowering message is for anyone who has fresh ideas for enacting global social change.
